

Sergeant Major Facts

- Scientific name: *Abudefduf saxatilis*
- The sergeant major has five black vertical lines on its side. When hiding, it can change its silvery scales to a dark gray color that almost matches the color of its lines.
- Sergeant majors form groups of up to a few hundred when feeding.
- Sergeant majors are a smaller fish species, reaching only nine inches in length.
- Males guard eggs until they hatch, which occurs in less than seven days.
