

French Angelfish Facts

- Scientific name: *Pomacanthus paru*
- French angelfish live in temperate to tropical waters in the Atlantic Ocean.
- Juvenile French angelfish travel with larger species of fish for protection. In return, French angelfish clean the parasites off of the large fish.
- Adult French angelfish form pairs and stay with the same mate for life.
- As a juvenile French angelfish matures into an adult, it will lose its stripes and turn gray with yellow scales, yellow pectoral fins on its sides and yellow around its eyes.
